Brandt Adds Versatile New 1040 Transport to Family of Grain Augers

Regina, Saskatchewan – Brandt is proud to announce the addition of the new **1040 Standard Transport Auger** to the most complete grain handling line-up in the industry. Unveiled at the 2012 Canada's Farm Progress Show in June, the new **1040 Standard Transport Auger** reaches everywhere you need to pull grain from on your farm, with the durability and reliability expected from Brandt.

Reach further with Brandt's industry leading intake reach of 13 ½ feet to effortlessly capture the center of even the largest Hopper Bins, or farther into flat bottom bins for less grain to clean up.

New square tube undercarriage with weight transferring axle design allows the auger to be extremely stable while unloading, while ¼ inch extended life flighting and thicker 13 gauge tubing last longer.

"This new model auger is a versatile addition to any farm, easily fitting under or inside even your largest bins." says Arnie Josephson, Sales Manager for Brandt Agricultural Products Ltd. "Add the EZ MOVE Auger mover and you have a great tool to move your grain as fast as possible."

Brandt Agricultural Products Ltd. engineers and manufactures spraying equipment, heavy harrows, and a complete line of grain handling equipment including grain augers, grain belt conveyors, grain carts, grain vacs, grain bag loaders, and grain bag unloaders.
